

An appointment has been made for you for breast cancer screening. The aim of the screening is to find breast cancer in the early, symptomless stage.

## INVITATION TO BREAST CANCER SCREENING

Screening location

If the time is inconvenient, you can book another, suitable time.

Your appointment

Your home municipality offers regular x-ray of the breasts (mammography) for the female population. The invitations are based on the year of birth, and the visit is free of charge to you.

During the visit, both breasts will be x-rayed from two angles. All information revealed during the visit is confidential. For comparison, we ask you to bring your previous mammograms with you.

The mammography results will be sent to you by personal letter. If you receive an invitation to further examinations, please remember that the majority of changes found in mammography are benign.

The information collected in screenings is stored in the patient records of the screening centres. These records are confidential and cannot be released to third parties without patient consent or special provisions of law.

The majority of breast cancers found in the early stages are treatable! Participation is worth your while.
